

Demo of MYNG 1.01

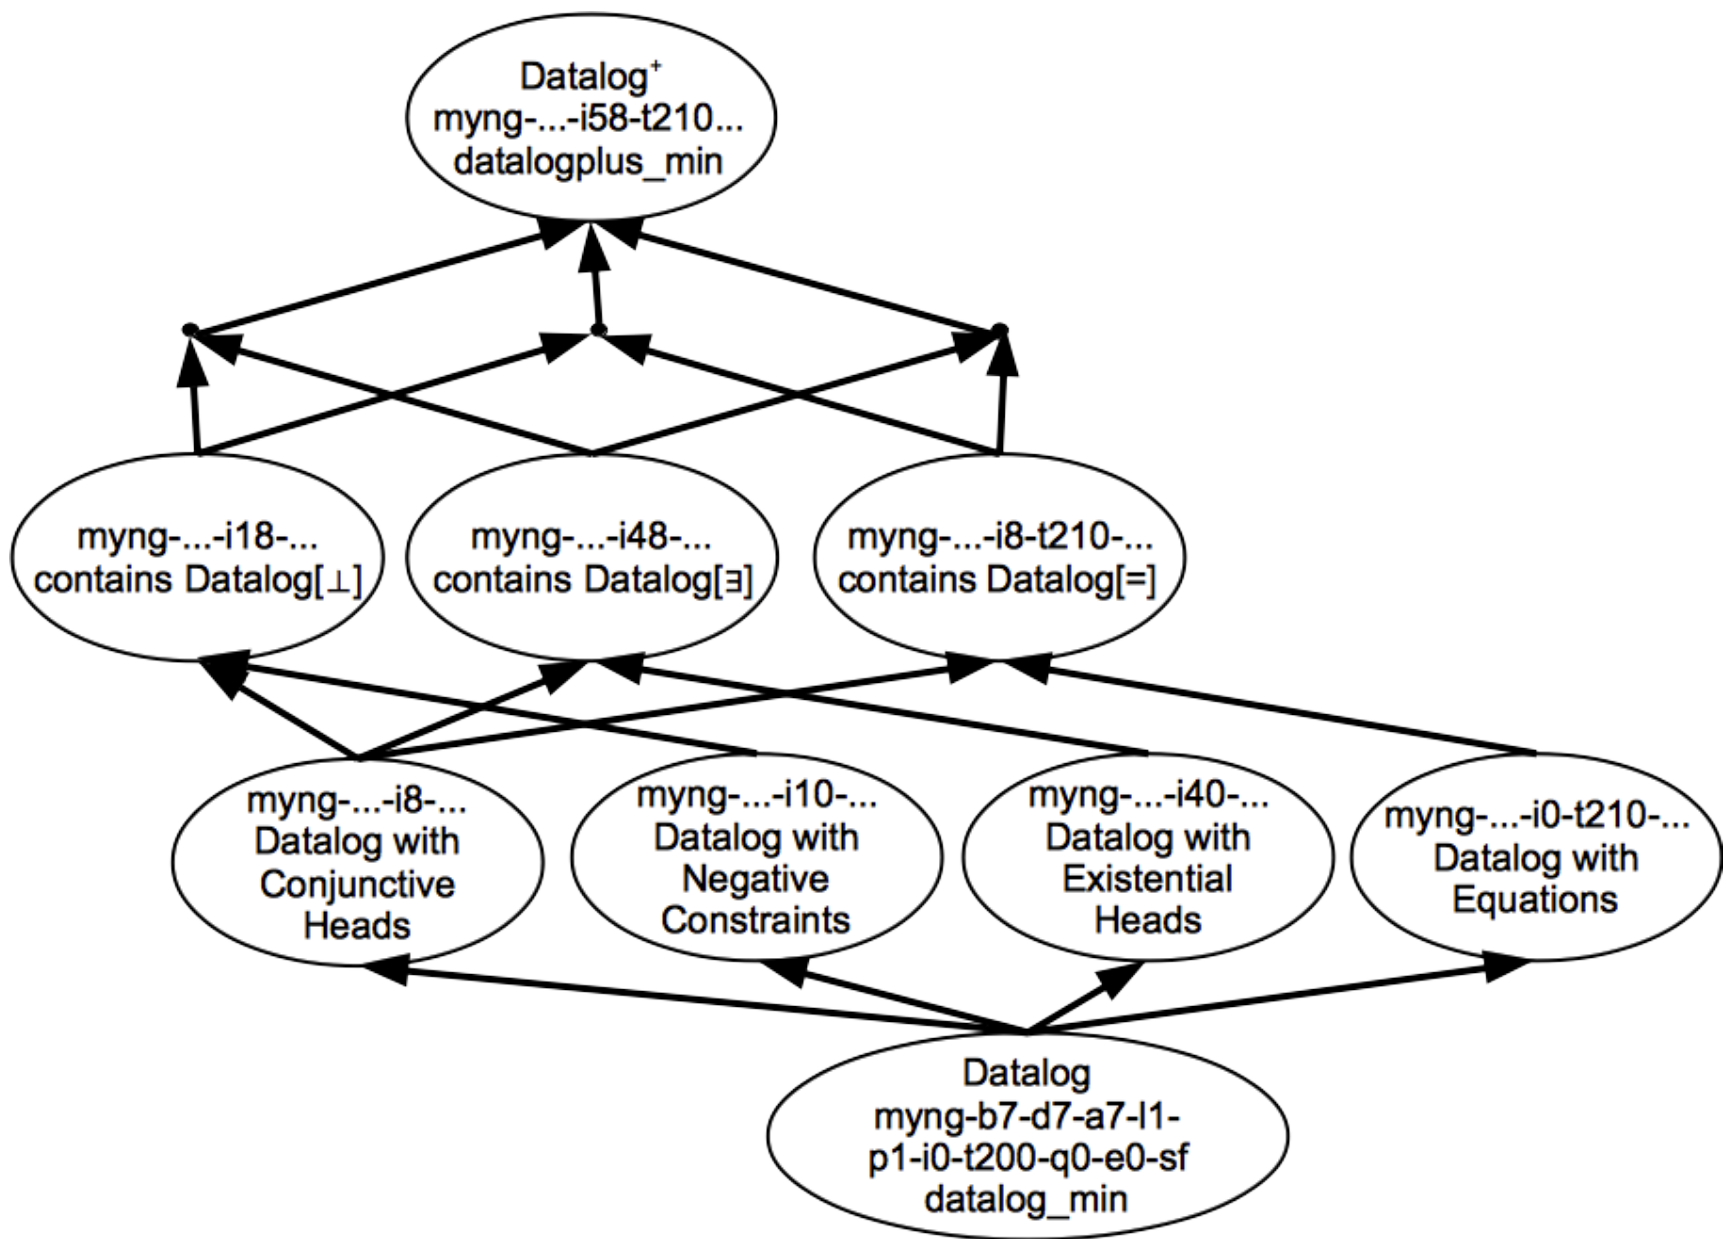

Authors: Tara Athan (<http://athant.com>) , Harold Boley (<http://cs.unb.ca/~boley/>)

This page (http://wiki.ruleml.org/index.php/Demo_of_MYNG_1.01) provides a quick demonstration of MYNG 1.01 for customizing sublanguages of Deliberation RuleML 1.01 (<http://deliberation.ruleml.org/1.01>) . Annotated slides (<http://ruleml.org/talks/DemoMYNG1.01>) were created from a version of this wiki page for presentation at RuleML 2014. The paper (<http://ceur-ws.org/Vol-1211/paper7.pdf>) ^[1] gives theoretical underpinnings.

Key new features in MYNG 1.01 include:

- Integration of new Relax NG schema modules -- and the RuleML sublanguages they define -- into MYNG, e.g.
 - Datalog⁺, Hornlog⁺, and their many extensions.
- Improved functionality of the MYNG GUI and REST interface, e.g.
 - GUI access to automatically-generated monolithic XSD schemas that are compatible with XML tools, e.g. JAXB.
 - Display of myng-code and myng-code-based schema URLs.

Contents

- 1 Quick Tour of the GUI
- 2 Configuring a Custom Relax NG Schema
- 3 Usage of Customized Schemas
- 4 References

1 Quick Tour of the GUI

- Open the MYNG GUI at <http://deliberation.ruleml.org/1.01/myng>.
- The selection form opens with the supremum language pre-selected:
 - Clicking the Reset Form button will always return to this selection.
 - The RNC field gives the myng-code for this language (myng-b3f-d7-a7-11-p3ff-i7f-tf3f-q7-ef-sf).
 - The XSD field gives the name of the best approximating anchor language for the selected language (naffologeq).
 - The two rows of five boxes with blue backgrounds group the configuration options into semantically-related facets, which will be discussed in greater detail below.

Start (Supremum)

MYNG GUI Starting View

Supremum Deliberation RuleML

MYNG 1.01 - the Deliberation RuleML Schema Selection Form

Instructions

Make selections from the form below. Click to Download the generated RNC schema or an approximating XSD anchor schema. To view the Relax NG driver schema, click "Generate Schema", then scroll down. To reset the form to the default (supremum) values, click "Reset Form".

[Reset Form](#) [Generate Schema](#) [Download RNC Schema](#) [Download XSD Anchor Schema](#)

RNC: myng-b3f-d7-a7-11-p3ff-i7f-tf3f-q7-ef-sf

XSD: naffollegeq

- ☐ French Long Names

Relax NG Schema URL = http://deliberation.ruleml.org/1.01/relaxng/schema_rnc.php?backbone=x3f&default=x7&termseq=x7&lng=x1&propo=x3ff&implies=x7f&terms=xf3f&quant=x7&expr=xf&serial=xf
XSD Anchor Schema URL = <http://deliberation.ruleml.org/1.01/xsd/naffollegeq.xsd>

- Below the facets, two URLs are given:
 - Relax NG Schema URL = http://deliberation.ruleml.org/1.01/relaxng/schema_rnc.php?backbone=x3f&default=x7&termseq=x7&lng=x1&propo=x3ff&implies=x7f&terms=xf3f&quant=x7&expr=xf&serial=xf
This is the MYNG "REST call with query string" to obtain the driver schema corresponding to the selections, which can also be reached using the myng-code (<http://deliberation.ruleml.org/1.01/relaxng#myng-code>) URL <http://deliberation.ruleml.org/1.01/myng-b3f-d7-a7-11-p3ff-i7f-tf3f-q7-ef-sf.rnc>.
 - XSD Anchor Schema URL = <http://deliberation.ruleml.org/1.01/xsd/naffologeq.xsd>
This is the URL for the monolithic XSD schema of the anchor language naffologeq.
- Clicking the Generate Schema button initiates a request to the MYNG REST interface which produces a copy of the Relax NG Schema at the bottom of the page (scroll down as needed).
- Buttons are also available for downloading the indicated RNC and XSD schemas.

Scroll Down in the MYNG GUI

Usage and Schema Driver

Relax NG Schema URL = http://deliberation.ruleml.org/1.01/relaxng/schema_rnc.php?backbone=x3f&default=x7&termseq=x7&lng=x1&propo=x3ff&implies=x7f&terms=xf3f&quant=x7&expr=xf&serial=xf
 XSD Anchor Schema URL = <http://deliberation.ruleml.org/1.01/xsd/naffologeq.xsd>

Usage

The RNC and XSD Schema URLs may be used directly for online validation - copy and paste as required by the validator. For a demonstration of RNC validation using the online service Validator.nu, see [How to Validate with the RuleML Parameterized Relax NG Schema](#). Some scripts and processing instructions may require that the character "&" be replaced by "&#amp;".

Clicking on the "Download RNC Schema" button downloads a copy of the schema driver into a file named according to the text labelled "RNC". To use the schema driver locally (offline), a local copy of the modules directory is also necessary - for download instructions, see the [Deliberation RuleML 1.01 Relax NG Directory](#). For more information about the re-engineering of RuleML into Relax NG, which made this modularization possible, see the [MYNG](#) page on the RuleML Wiki.

2 Configuring a Custom Relax NG Schema

We will configure the RuleML sublanguage called "disdatalogplus_mid". Its features include Disjunctive Rules ("dis"), Datalog Expressivity ("datalog"), Conjunctive Rules, Existential Rules, and Equality ("plus"), and an assortment of Deliberation RuleML extras such as reification and annotation ("_mid").

- Expressivity "Backbone":
 - This is a radio button input where we Select One level of the Expressivity "Backbone".
 - For our example, we select the Datalog level of Expressivity, corresponding to function-free Horn Logic.
 - Also, all the Expression Options (second row of facets) become disabled, because Datalog is function-free, so those options are irrelevant.
 - Notice that the "b" (backbone) and "e" (expressions) components of the myng-code change (from b3f to b7 and from e7 to e0).
 - Notice that the anchor language changes from "naffologeq" to "nafnegdishornlogplus". This anchor language is an under-specified approximation of the selected language, which has Horn Logic Expressivity.

Datalog

Selection of Expressivity Datalog

- Term Sequences:
 - We keep Polyadic Term Sequences.
- Term Options:
 - We disable the frame-like options: Object Identifiers and Slots.
 - Notice that the "t" (terms) component of the myng-code changes from tf3f to tf30.
- Quantification Options:
 - We disable all of them.
 - Notice that the "q" (quantification) component of the myng-code changes from q7 to q0.
 - The anchor language now reads "disdatalogplus_mid". This is one of the RuleML sublanguages that is newly available in Version 1.01. Recent research^[2] has shown that with some additional constraints, querying becomes decidable in these languages. The additional constraints are too complex to implement directly in Relax NG or XSD, but may be possible via Schematron.

3 Usage of Customized Schemas

- Instructions for online validation of RuleML instances against the Relax NG schemas are presented at "Validating with Relax NG for RuleML 1.01" (http://wiki.ruleml.org/index.php/Validating_with_Relax_NG_for_RuleML_1.01) .
- Example in Validator.nu: Validating `disdatalogplus_min.ruleml` (http://validator.nu/?doc=http%3A%2F%2Fdeliberation.ruleml.org%2F1.01%2Fexa%2FDatalogPlus%2Fdisdatalogplus_min.ruleml&schema=http%3A%2F%2Fdeliberation.ruleml.org%2F1.01%2Fmyng-b7-d7-a7-11-p1-i78-t210-q0-e0-sf.rnc&showsource=yes) against the smallest Relax NG schema (`disdatalogplus_min`, a sublanguage of the above-introduced `disdatalogplus_mid`) for this instance, referenced using its myng code.

Validator.nu
