

Running OO jDREW Within Eclipse

- 1) Download and import the source files into Eclipse:
https://sourceforge.net/project/downloading.php?group_id=235724&use_mirror=&filename=OOjDREW961.zip&51878478
- 2) To run OO jDREW, run:
OO jDREW - Rule Responder->src/jdrew->jdrew.oo.gui->TopDownGUI.java
- 3) Place your taxonomy in the Type Definition window and load the type information. Make sure to select RDFS if the taxonomy is in RDF/RDFS.
- 4) Place the POSL knowledge base(s) in the Knowledge Base window and Parse Knowledge Base. Again, make sure to select POSL if your knowledge base is in POSL.
- 5) Type your query in the Query window and click Issue Query.
- 6) Example WellnessRules query:

```
myActivity(p0001,Walking,?InOut,1:integer,  
          5:integer,?StartTime,?EndTime,?Place,?Duration,?Level).
```

Note: Min and Max RSVP values MUST be provided, while N3 Min and Max RSVP MUST be variables. The respective queries will not work otherwise.
